

**Introduction:**

This document describes the NDTMS verification rules and the severity setting of each one.

The document is grouped into fields (CDS-F has 94 fields) and details when the rule fires and what severity is logged against it.

**Report Severity Level:**

DET - FATALs, ERRORs, and WARNs

Severity Level and Explanation	Most Common Errors	Possible Solutions
<p><b>1 - FATAL</b> The file/record contains a severe data error and cannot be loaded into NDTMS. A fatal message will stop all further processing of the file/record.</p>	<p>Field headers missing or incorrect field header format</p>	<p>A field (e.g. FINITIAL) header is missing from the file - insert a column with the missing field header (FINITIAL) and populate the row contents</p>
<p><b>2 - ERROR</b> A record in a file contains a data error that has prevented the entire record from being loaded into NDTMS. The load percentage of a file is related to the number of records with errors in a file, the higher the load percentage, the lower the number of records with errors.</p>	<p>DOB Incorrect format or missing (mandatory field) DOB invalid date (must be between 1902 and current) Primary Drug is missing Triage date is missing Sex is missing SINITIAL: Incorrect format or missing (mandatory field) FINITIAL: Incorrect format or missing</p>	<p>Add missing date of birth in file or change date format to dd-mm-yy Add a valid date of birth Add missing drug in file Add missing triage date in file Add missing sex in file Add missing surname in file Add missing first name in file</p>
<p><b>3 - WARNING</b> A record in a file contains a data error that requires correcting, but has not prevented the entire record from being loaded into NDTMS. The data quality percentage of a file is related to the number of records with errors and warnings in a file, the higher the data quality percentage, the lower the number of records with errors and warnings.</p>	<p>Age of first use for drug 1 cannot be greater than age at referral Modality End Date cannot be after current date</p>	<p>Check date of birth and referral date and correct It is not possible to add future dates on the data entry tool. Remove the modality end date until the modality actually ends.</p>
<p><b>4 - INFO</b> A record in a file contains a potential data error that might need correcting, but has not prevented the entire record from being loaded into NDTMS. This severity does not affect load or data quality percentage of a file.</p>		
<p><b>5 - REPAIR</b> A record in a file contains data that has been repaired during the validation process. This severity does not affect load or data quality percentage of a file.</p>
